

CIES Football Observatory

World Cup 2014 Scenario

World Cup Scenario

Méthodologie

L'Observatoire du football du CIES a analysé les trajectoires de carrière des joueurs ayant fait partie de l'effectif des quatre derniers finalistes de la Coupe du Monde. Nous avons ainsi identifié quelques-uns des facteurs qui ont permis à ces équipes de surclasser leurs rivaux.

Sur cette base, nous avons sélectionné les indicateurs suivants pour évaluer le potentiel des équipes qualifiées pour le Mondial brésilien:

- Matches en championnat sur l'ensemble de la carrière
- Buts en championnat sur l'ensemble de la carrière
- Matches en championnat lors des deux dernières années
- Buts en championnat lors des deux dernières années
- Matches en équipe nationale A lors des deux dernières années
- Matches en Coupe du Monde sur l'ensemble de la carrière

Les résultats pour chaque équipe nationale sont reportés dans des diagrammes comptant des cases vertes ou rouges. Une case verte indique que la valeur mesurée pour l'équipe en question est supérieure au minimum observé pour les quatre derniers finalistes au niveau des 11 joueurs avec les valeurs les plus élevées. Si ceci n'est pas le cas, la case est rouge. Une plus grande proportion de cases vertes indique une plus forte probabilité d'avancer dans la compétition.

En cas d'égalité, nous avons pris en compte le nombre de matchs de Coupe du Monde joués par les sélections nationales en question lors des quatre dernières éditions (tradition à la Coupe du Monde).

A propos du CIES Football Observatory

L'Observatoire du football est un groupe de recherche faisant partie du Centre international d'étude du sport (CIES), une fondation de droit privé affiliée à l'Université de Neuchâtel (Suisse). Créé en 2005 par Raffaele Poli et Loic Ravel, ce groupe se compose de quatre chercheurs spécialisés dans la récolte et l'exploration de données, ainsi que dans leur analyse statistique.

Deux rapports sont publiés chaque année. En janvier, la Demographic Study propose une analyse approfondie du profil des joueurs et des équipes dans 31 ligues de première division d'associations nationales membres de l'UEFA. En juin, l'Annual Review se concentre sur les joueurs et les clubs du big-5 en complétant l'approche démographique par des analyses économiques et l'étude des performances sur le terrain.

Depuis 2005, l'Observatoire du Football du CIES a régulièrement été mandaté pour mener des études par de prestigieuses institutions parmi lesquelles on compte notamment la FIFA, l'UEFA, l'European Club Association (ECA), l'European Professional Football Leagues (EPFL), la Swiss Football League (SFL), ainsi que des clubs professionnels dans différents pays.
